

Product: Activated Hepatocyte Growth Factor Activator (HGFA), Human
Catalog#: 27403
Category: Tumor Research

Description: Quantitative determination of **Human** Activated Growth Factor Activator (HGFA)
Assay Format: EIA
Determination: 12x8 tests
Sample Type: Serum, EDTA plasma, Cell culture media
Sensitivity: 29.7 pg/ml
Range of Detection: 0.23-15 ng/ml
Sample Size: 100 µl
Assay Feature: No samples pretreatment required
Incubation: 60 min 37C, 30 min refrigerate, 30 min room temperature
Assay Time: Approx. 2 hours
Status: For Research Purposes Only
